The basics of all new developments is a good idea

At Raidho we think that the idea that led us to try out a new design for our units has brought amazing news to our sound concept. We're not talking rocket science - in the contrary - simplicity and the will of being innovative in development has consequently given us a speaker unit we believe to revolutionize the future of high end Hi-fi sound.

A look into a part of the speaker "engine" with new and simple but unique design.

Simply senses

Raidho strives to put as many senses in use, when listening to sound, as possible. That is why the experience of an Raidho loudspeaker appeals to the delicate ear as well as the eyes with beautifully crafted and stylish cabinet design.

Handling and feeling of weight, materials and finish only adds more joy to the impression of the new S2 loudspeaker - You feel it, in your eyes, ears, fingers and body, Raidho is in fact state-of-the-art.

The power of Raidho S2

It is our belief that Hi-fi sound is more than fulfilling requirements of electronic measure devises. The sound from a Raidho must fulfil the requirements of the worlds most unique and delicate measure tool - the human brain. The downside of this way of making sound concepts is that our brains are individually in the perception of almost all senses and thereby not objective and fitted into scientific formulas. There is no objective alibi for preferring the Raidho sound - only your own subjective experience which we're convinced you will prove us to be right.

SPECIFICATIONS	
Series	S
Model:	2.0
Size: (WxHxD)	177 x 1140 x 370 mm / 240 x 500 mm
